Item No. Declaration

CASCOO. China.

Zhongshan CASCOO Metal Machinery Co. Ltd, based on technological innovation and scientific management, is an intellectually designing & manufacturing enterprise of castors and wheels. CASCOO is one of the leading brands in the European castor market. CASCOO combines the words CASTor and COOperation. "Cooperation" not only refers to the dealings with customers, but also internally to contacts within the CASCOO Group and its employees.

In 2013, CASCOO was founded in Xiaolan, Zhongshan, Guangdong Province. Two years later CASCOO completed its modern artistic plant building, which was designed and built by an artist and his architectural team. CASCOO's modern plant building provides more than 20,000 sqm. Our ability includes R&D, tooling, injection molding, metal stamping, die casting, fully automatic production lines for elastic rubber and polyurethane and finally quick assembly lines. CASCOO is well equipped with laboratories. All these made CASCOO the well-known brand name in the world castor market, which received highly reputation on castor design, cost control, QA and technic. The monthly capacity is around 40 ISO containers.

In 2016, CASCOO China was officially rated and successfully identified as high-tech enterprise by Guangdong provincial government. The blue elastic rubber castor for example is one of CASCOO's flagships due to its excellent performance and low noise characteristics.

CASCOO has unique marketing strategy. It is the very first Chinese castor company setting up a branch in Europe to distribute products to the European market. The distribution center in Germany provides around 8,000 sqm. CASCOO has attracted attention quickly because no brand ever has entered the European markets so determined, quickly and successfully.

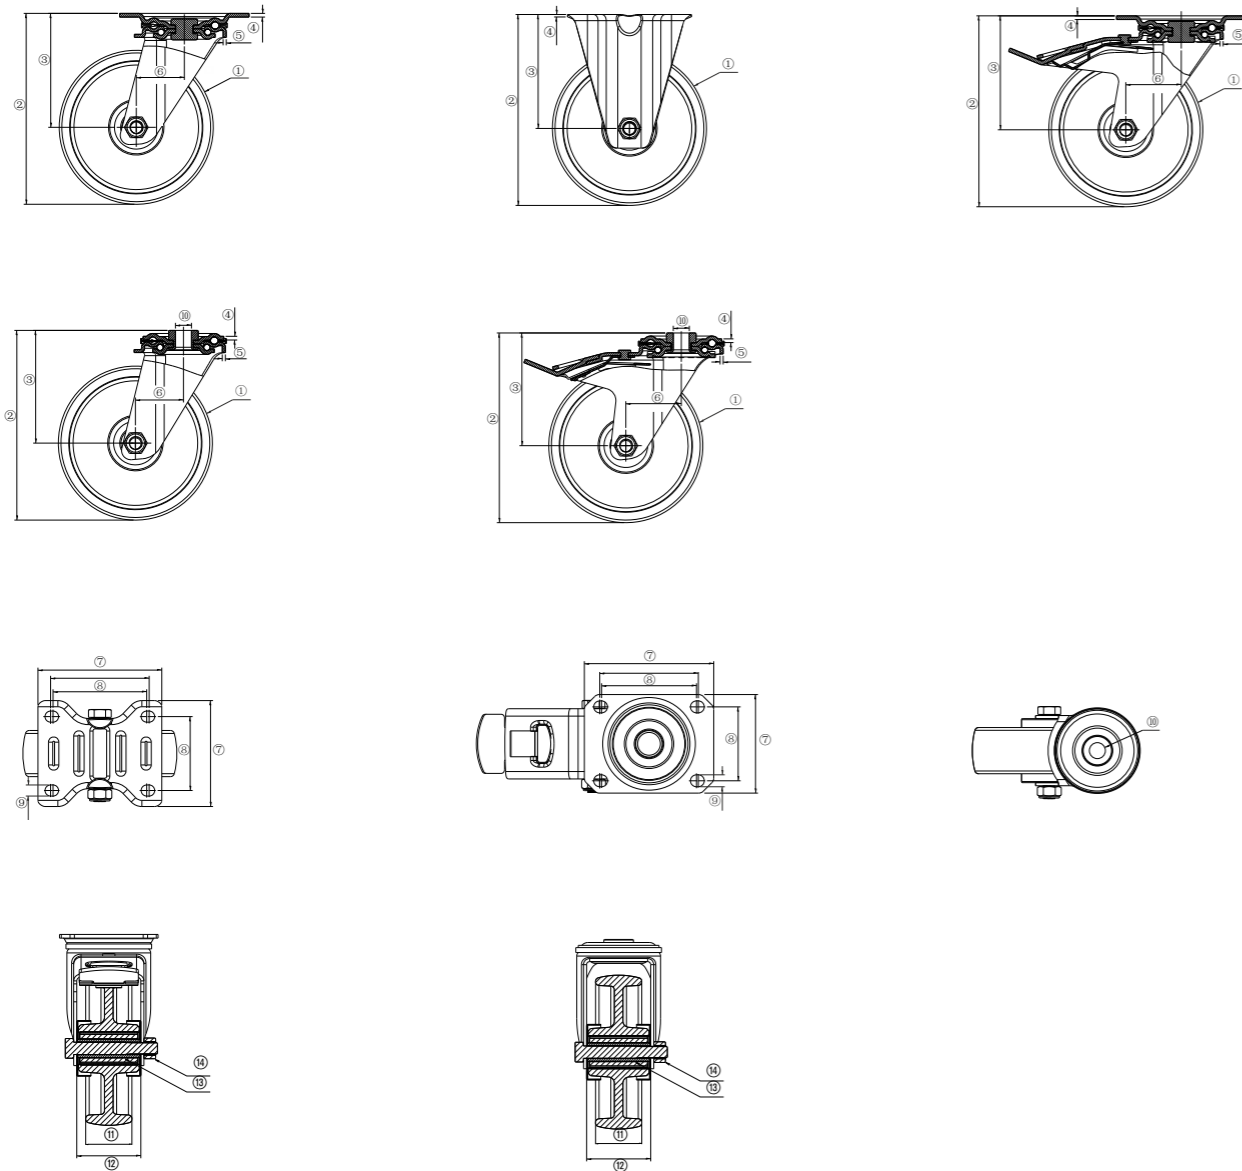

CASCOO. Europe.

CASCOO Europe GmbH, parallel to the facility in Xiaolan / China, was also established in 2013 and is directly linked to the manufacturer. The registered office of the company is located in Ruethen, in the middle of Germany. CASCOO Europe expanded within the past years to a well-known distribution center which is distinguished by good service and fast deliveries. Through the newly built high-bay warehouse, which was finished end of 2015, CASCOO Europe has storage capacities of more than 4.000 pallets spread over 8,000 sqm. Both the procurement of direct containers from China as well as the support of replacement business from Germany are part of the everyday business for CASCOO Europe. The German head office is also coordinating several agencies and partners within Europe. The flexibility and closeness to our customers is just as important to us as the constant exchange with CASCOO China regarding development, delivery times and expansion of resources. CASCOO Europe's goal is a lean administrative structure without compromising expertise. This and other major advantages against the competition, e.g. the direct contact to China, allow the company to grow at the desired speed.

Castor types

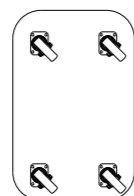

Swivel castor(without brake) can rotate 360 and should be used without supervision on plain grounds only.
 Fixed castors can only move in 2 directions and should be used without supervision on plain grounds only.
 Swivel castors with a total brake can rotate 360 degree and are meant to secure the transport trolley against roll away.
 Combinations with one total braked castor only should be used without supervision on grounds with max. 2% gradient..
 Combinations with two or more total braked castor only should be used without supervision on grounds with max. 5% gradient..
 This information applies to the use of transport trolleys under normal conditions (no use of force) and not at a overloading.
 Swivel castors with a total brake can rotate 360 degree and can be changed to the characteristics of a fixed castor by locking a pedal.
 The wheel is never braked, which means that this castor should be used without supervision on plain grounds only.

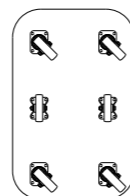

Allocation of total load capacity

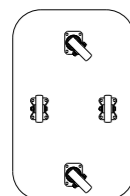

2 swivel / 2 fixed castors
 For a precise handling on longer and varied routes.
 Load capacity calculation:
 3 from 4 castors.

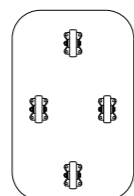

4 swivel castors
 For any easy movement on short and plain routes.
 Load capacity calculation:
 3 from 4 castors.

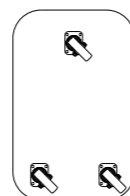

4 swivel / 2 fixed castors
 For a high stability of high loads on long routes.
 Load capacity calculation:
 4 from 6 castors.

2 swivel / 2 fixed castors
 For a precise handling especially in narrow spaces.
 Load capacity calculation:
 3 from 4 castors.

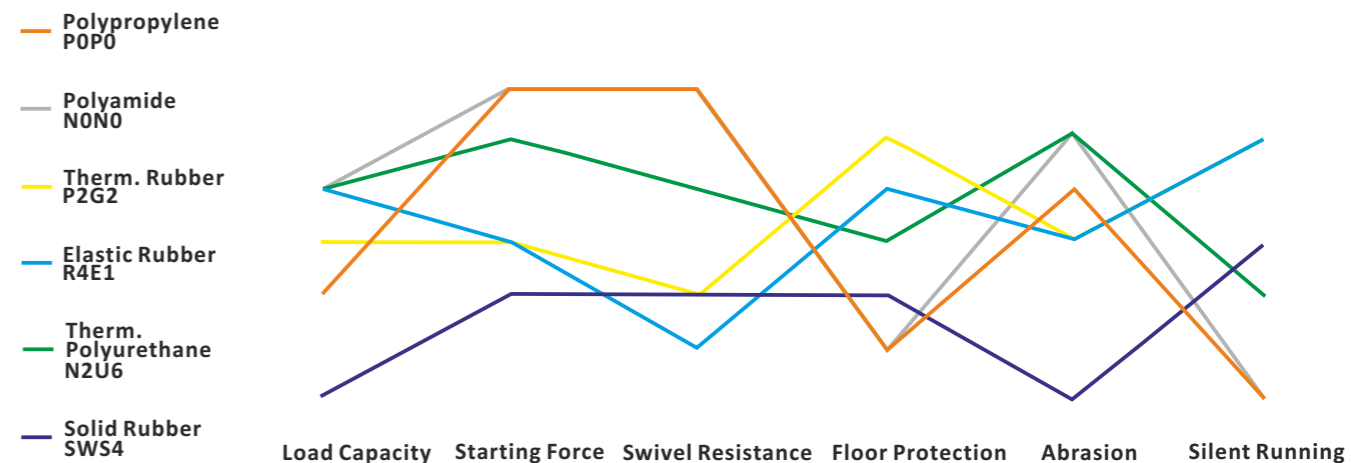

4 fixed castors
 The center castors have to be a bit larger.
 To be used on long routes with no changes of
 Load capacity calculation:
 3 from 4 castors.

3 swivel castors
 For a flexible handling on routes with almost no straight sections.
 Only small and balanced loads.
 Load capacity calculation:
 3 from 3 castors.

Wheel bearings

With the inside bearing each castor or wheel becomes alive. In addition to the tread and the wheel center, mobility mostly depends on the wheel bearing. No doubt an ideal wheel bearing influences the performance of every castor. Three types of bearing are available for your opinion: plain bearing, roller bearing and precision ball bearing. The relevant bearing depends on the castors performance.

Plain bearings
 The plain bearing is the simplest bearing, providing an excellent lubrication and maintenance free. It is applicable for light duties or small and low handling wheels.

Roller bearings
 Made of carbon steel with diameter respectively 4mm and 5mm, the roller axle is mostly used for industrial applications. Roller bearing features high load capacity and low roll resistance.

Precision ball bearings
 The precision ball bearing is composed of a fixed one-race ball bearing supporting axial and medium weight radial loads. Seal shielding is flexible for assembling. It is affordable for high rotation speed and heavy load capacity.
